# What is ESET Cloud Office Security?

**ESET Cloud Office Security provides advanced protection for Microsoft 365 applications with ultimate zero-day threat defense capabilities.**

Its combination of spam filtering, anti-malware scanning, anti-phishing and cloud sandboxing helps to protect your company communication, collaboration and cloud storage. Our easy-to-use cloud console gives you an overview of detected items and immediately notifies you when a detection occurs.

# Protect your collaboration tools

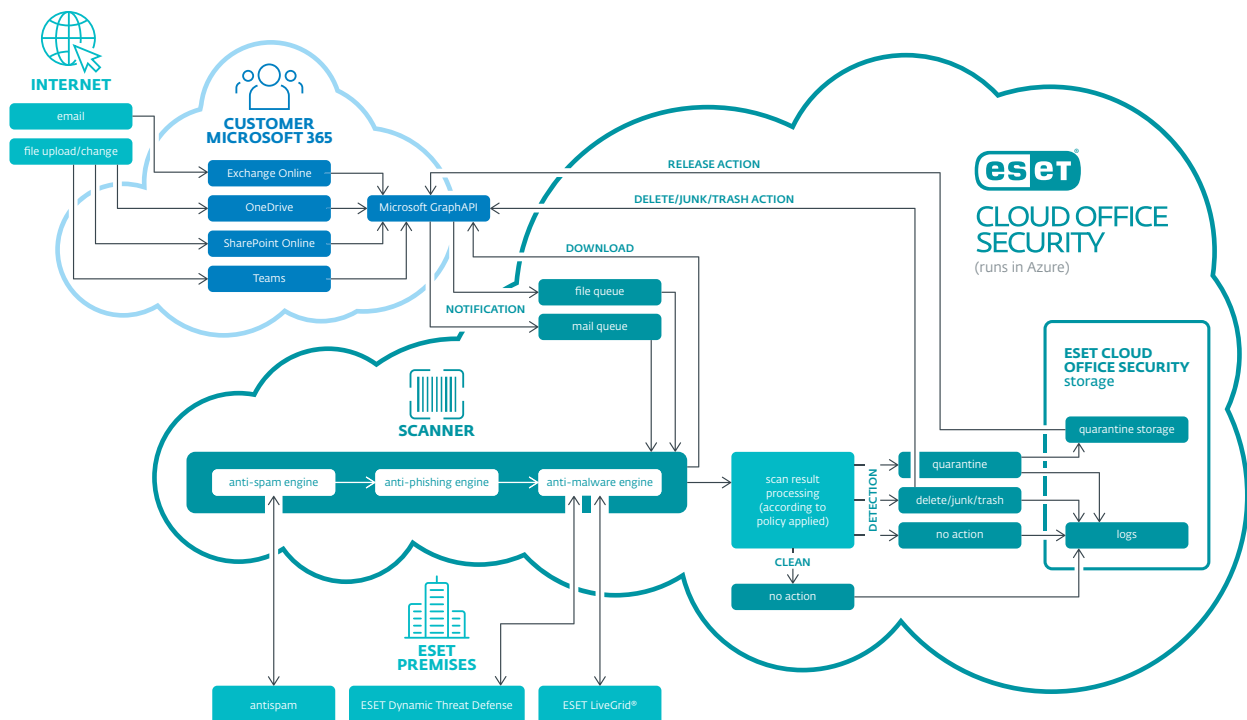

The combination of spam filtering, anti-malware scanning, anti-phishing and cloud sandboxing helps protect your company communications against infections, minimizes any work disruption due to unsolicited messages, and helps prevent targeted attacks as well as new, never-before-seen types of threats, especially ransomware.

Anti-malware protection safeguards your company's Exchange Online, OneDrive, SharePoint Online and Teams.

This product is delivered as a service, with a dedicated management web-console that's accessible anywhere.

- Ensures infection-free company communications and collaboration
- Minimizes adverse effects of unsolicited messages on everyday productivity
- Prevents incoming external emails from being used as a channel for targeted attacks

## How it works

# Use cases

## PROBLEM

A company owner wants to apply specific measures to minimize cybersecurity risks and maintain business continuity.

## SOLUTION

- ✓ The company admin can inspect the amount of spam, malware or phishing emails detected by ECOS, and identify which users are most frequently targeted by malicious emails.

---

- ✓ The admin can observe at which times most spam is received by the company.

---

- ✓ Based on this these data and insights, the admin is able to prepare a report with relevant information for executives.

---

## PROBLEM

Ransomware tends to enter unsuspecting users' mailboxes through email.

## SOLUTION

- ✓ ESET Cloud Office Security automatically submits suspicious email attachments to ESET Dynamic Threat Defense.

---

- ✓ ESET Dynamic Threat Defense analyzes the sample in an isolated cloud sandbox environment, then submits the result back to ESET Cloud Office Security, usually within 5 minutes.

---

- ✓ ESET Cloud Office Security detects and automatically remediates attachments that contain malicious content.

---

- ✓ The malicious attachment does not harm the user or company network.

---

## PROBLEM

Frequent exchange of large files on company cloud storage between internal and external people.

## SOLUTION

- ✓ Sensitive company data on OneDrive need to be protected with an additional layer of security.

---

- ✓ The admin can activate a third-party cloud security solution such as ESET Cloud Office Security to protect the company's Microsoft 365 apps.

---

- ✓ A powerful anti-malware engine scans all new and changed files and prevents the spread of malware through OneDrive across multiple devices.

---

## PROBLEM

The needs of a specific group of employees must be balanced with the need to keep the company secure.

## SOLUTION

- ✓ The admin can configure different protection settings for each unit, or even per user.

---

- ✓ So if a small team in the company wants to receive emails important for their work (e.g. marketing newsletters), the admin can set up a policy and disable antispam for this group.

---

- ✓ The company remains protected against malware, and the majority of employees don't receive any spam.

---

## ANTI-SPAM

Now using an enhanced, award-winning engine with improved performance, this essential component filters all spam emails and keeps user mailboxes free of unsolicited or undesired messages.

## ANTI-PHISHING

Prevents users from accessing web pages that are known to be phishing sites. Email messages can contain links that lead to phishing webpages. ESET Cloud Office Security searches the message body and the subject of incoming email messages to identify such links (URLs). The links are compared against a database of known phishing links, which is updated constantly.

## ANTI-MALWARE

Scans all incoming emails and attachments as well as all new and changed files. This helps to keep users' mailboxes free of malware and prevents the spread of malware through cloud storage across multiple devices.

## DYNAMIC THREAT DEFENSE

Proactive cloud-based technology using advanced adaptive scanning, cutting-edge machine learning, cloud sandboxing and in-depth behavioral analysis to prevent targeted attacks as well as new, never-before-seen types of threats, especially ransomware.

## QUARANTINE MANAGER

Admins can inspect objects in this storage section and decide to delete or release them. This feature offers simple management of emails and files that have been quarantined by our security product. On top of that, admins can download quarantined items and investigate them with other tools locally.

## AUTOMATIC PROTECTION

With this option enabled, admins can be sure that new users created within the Microsoft 365 tenant will be automatically protected without the need to go to the console to add them separately.

## NOTIFICATIONS

Notifications greatly improve admins' efficiency by removing the need to constantly check the dashboard. When a potentially suspicious new activity is detected within ESET Cloud Office Security, it can send out an email to notify admins or users so that they are immediately made aware of the threat.
